One long term approach would be to look at the pesticide programs registration review schedule for the pesticides of concern here in R10 and to ensure the review includes modeling that is more appropriate for the use pattern here. One of OPP's primary goals early in the registration review process is to identify all the use patterns, crops the product is applied to, application methods, maximum application rate information, etc. The goal is to gather all that "accurate" use information early so the modeling can be done to reflect up-to-date use patterns. This results in a more accurate risk assessment. This would be the opportunity for OPP to begin to address exposures and potential risks specifically from the logging activities that are pretty specific to R10...DH

Thanks so much, Dirk. I agree that it would be worthwhile for us to talk from the water side on site-specific conditions that might be unique to our region and the West Coast when considering the

Ex. 5 - Deliberative

Ex. 5 - Deliberative

I'm sure the folks working in OEA working on Triangle Lake (Sheila Fleming, Elizabeth Allen, Andrea Latier) might also be able to help out. But we could certainly speak from the Oregon-specific to the challenge we're having with the labels using assumptions that don't apply out here.

Thanks so much, Linda. This is really interesting and helpful for the write-up for OR CZARA and comments we got on drift concerns in Oregon. Alan, FYI.
